

Use of disinfectant cleaner

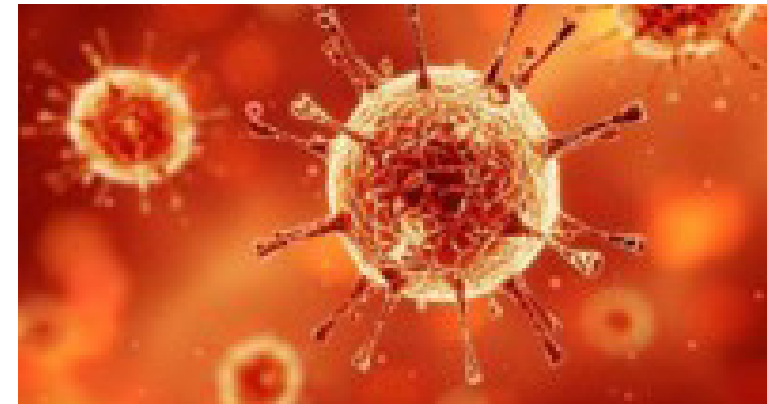

- Disinfection perform with disinfectant, which is meant for removing bacterial dirt
- Before disinfection of surfaces, read the disinfectant substance product card
- Prefer moistening bottle or original bottle of manufacturer
- While disinfecting, follow contact time of the substance applied to the surface. For example if on the product card given duration is 5 minutes, then disinfectant has to be on the surface 5 minutes and surface must not dry before.
- With frequent use of disinfectant there is a direct risk of disinfectant getting into human's body organism and weakens immune system!

Waste management

- Cleaning textiles and -gloves, used after COVID-19 case, are hazardous waste
- After work, in first possibility, throw work equipment and personal protective equipment to the yellow garbage bag
- Close yellow garbage bag with strong knot before leaving the room
- Take the bag on first possibility to the container of hazardous waste, which are located next to our main offices

Avoid panic and act smart!

COVID-19 is spreading quickly, but compared to flu generally progresses slightly

When to clean?

- First read carefully the instruction of virus preventive cleaning of contact surfaces
- You may begin cleaning of rooms if rooms are free from users, as known through the air these viruses doesn't spread
- If cleaning, pay attention to contact surfaces, for example pendant lamps doesn't need cleaning
- Possibly switch off conditioner in the room, for not to release germs to the air again

Personal protective equipment

- Use disposable work equipment and disinfectant when cleaning
- Using gloves is compulsory! Below the disposable gloves wear base-gloves, to avoid direct contact with the virus in case rubber gloves should break
- Use protective mask if possible (not compulsory if there is no contact with faces). NB! Do not use respirator!
- Do not use face mask over 120 minutes. After that it must be utilized!
- Used gloves throw away right after using to the yellow garbage bag, wash hands with soap and water, dry with hand paper and disinfect
- Try to avoid touching facial area with your hands!

Use of disposable cloth for cleaning after Covid case

- If possible, use disposable cloths to utilize removed dirt with cloth and be sure, that dirt doesn't spread
- Fold disposable cloth to four equal parts
- Use only the marked sides on the four-folded cloth
- Used disposable cloths throw to yellow garbage bag and take it to the container of hazardous waste, which are located next to our main offices

Use of microfibre cloth for cleaning after Covid case

- Use clean microfiber cloth/mop moisturized with clean water for cleaning surfaces
- Moisturized cleaning cloths/ mops must be used within 4 hours
- When cleaning, observe aseptic technique - to collect dirt and not to spread it
- After each cleaned surface turn new clean side to the cloth to avoid spreading dirt
- If all sides of cloth are used, then take new cloth and continue work
- Used single-use work equipment throw in first possibility to yellow garbage bag, close the bag take it to the container of hazardous waste, which are located next to our offices
